Abstract

Many media and communication journals have adopted the Publication Manual of the American Psychological Association (APA style) as the guidelines for their authors to prepare manuscripts. The APA style has been the standard of writing research papers in social and behavioral sciences. Our aim is to provide practical guidance on the APA style. We delineate the main points of APA style that are essential to manuscript preparation: manuscript format and structure, numbers and statistics, reporting results, and references. We focus on style rules that may confuse those unfamiliar with the APA format and offer examples and samples to increase immediate applicability. Writing in APA style requires persistent attention to detail, which is essential part of successful writing.

Key words: writing, APA style, manuscript preparation

* A preliminary version of this article was presented at the annual conference of the Korean Society for Journalism and Communication Studies, Busan, Korea, May 19, 2018.

** Corresponding author: chseun@gmail.com

In 1929, an APA committee including professionals in various fields such as psychologists, anthropologists, and business managers published a seven-page article titled “Instructions in Regard to Preparation of Manuscript” in *Psychological Bulletin* (Bentley et al., 1929), which was the beginning of the APA style (APA, 2010). Today the stylebook is in its sixth edition, which is adopted for many media and communication journals including *Asian Communication Research* (Shim, 2017). The purpose of publishing this book is to “establish a simple set of procedures, or *style rules*, that would codify the many components of scientific writing to increase the ease of reading comprehension” (APA, 2010, p. xiii). In short, the APA style is to standardize writing for the behavioral and social sciences (APA, 2010, Chapter 1).

The Publication Manual of the American Psychological Association (6th ed., APA, 2010) deals with various essential elements of writing a scientific paper from planning to publishing. For instance, the manual involves ethics of writing and publishing, structure and content of manuscript, mechanics of style, and citing sources. Although this book aims to help students and researchers prepare a manuscript, those who are not familiar with this type of work may be intimidated by its voluminousness, though the current edition (272 pages) was significantly shortened as compared to the fifth (439 pages). Thus, the purpose of the present article is to clarify some basic rules of APA style and provide their examples. Specifically, we focus on issues of manuscript format and structure, numbers and statistics, reporting results, and references. Also, we provide examples and samples to help readers in practice.

Manuscript Format and Structure

Format and Elements

Using Microsoft Word, set page size to A4 (210 mm x 297 mm) with margins of 2.54 mm (1 inch) on all four sides. If you are about to submit a manuscript, you should check the journal's instructions for authors. Some journals may require different size (e.g., letter-size) or specific file format (e.g., *.doc only). The typeface that APA style prefers is Times New Roman with 12-point size (APA, 2010, p. 228). Double-space between all text lines from the title to appendices including table notes and figure captions. Use left alignment and indent the first line of every paragraph using the tab key (five to seven spaces, about ½ inch). Do not indent the first line of the abstract. Manuscript pages should be arranged in the following order (APA, 2010, pp. 229–230):

1. Title page – page 1
2. Abstract – page 2
3. Text – starts on page 3
4. References – start on a separate page
5. Tables – start each on a separate page
6. Figures – start each on a separate page; includes caption
7. Appendices – start on a separate page

Number pages consecutively from the title page at the right top margin. Put the running head of your manuscript along with the page number. The running head is an abbreviation of the title, which is no more than 50 characters (see APA, 2010, Chapter 8). The title page includes title, author's name and institutional affiliation, and author note. Author notes are arranged by complete departmental affiliation, changes of affiliation (if any),

acknowledgements and special circumstances (if any), and contact information. An example of notes is as follows:

Jane Kim, Department of Communication, AAA University;
John Lee, Department of Media, BBB University, Republic of Korea.

John Lee is now at Department of Media and Communication, CC University, Republic of Korea.

This work was supported by the National Research Foundation of Korea (NRF-XXXXX). An earlier version of this research was presented at the Spring Conference of the Korean Society for Journalism and Communication Studies, Seoul, Korea, May 2018.

Correspondence concerning this article should be addressed to Jane Kim, Department of Communication, AAA University, 100 Seoul-ro, Seoul-gu, Seoul 12345, Republic of Korea. E-mail: janekim@aaa.edu

When submitting a manuscript to a journal, you have to save and submit the title page separately from the main document.

Headings

The APA style recommends up to five levels of heading (see APA, 2010, Table 3.1):

Level 1 Heading

Level 2 Heading

Level 3 heading.

Level 4 heading.

Level 5 heading.

Two or three levels are generally used for readability.

Typically, Method, Results, and Discussion are the first-level headings, and these may have a few levels of sub-headings. For instance:

Method

Participants and Procedure

Measures

Social media use. Use of social media including Facebook and Instagram was measured with...

Loneliness. To assess participants' loneliness...

Results

Descriptive Statistics

Social Media Use and Loneliness

Discussion

Theoretical Implications

Limitations and Future Direction

Conclusion

This is an example of manuscript structure; the Result or the Discussion section of your manuscript may not have any subheading.

Numbers and Statistics

Numbers

The general guidance of APA style on writing numbers is to use words for numbers below 10 (e.g., three participants, five groups, nine of these) and to use numbers to express numbers 10 and above (e.g., 10 people, 45 females, 210 participants). There are, however, exceptions (see APA, 2010, pp. 111-112). For instance,

use numerals to express numbers that represent statistical or mathematical functions, decimal quantities, and percentages and ratios (e.g., 0.33 of, a ratio of 5:1, 9% of the sample). Also, if a sentence starts with any number, use words (e.g., Sixty-two percent of the sample).

Decimal Fractions

If a value is less than 1.0 but possible to exceed 1.0, use a zero before the decimal point (e.g., $SD = 0.28$, $F[2, 321] = 0.35$, $t[42] = 0.08$). For a value that can never exceed 1.0, do not use a zero before the decimal point (e.g., $\alpha = .78$, $r = -.23$, $p < .001$). The principle regarding the number of decimal places is to “round as much as possible” (APA, 2010, p. 113), considering the scope of data and statistical precision. It is generally recommended to round to two decimal places, thus report correlations, proportions, and inferential statistics such as F , t , and χ^2 to two decimals. Regarding p values, type exact p values (e.g., $p = .008$, $p = .56$) to two or three decimal places, but when p values are less than .001, report them as $p < .001$.

Statistical Symbols

Regarding statistical symbols, population parameters are represented by Greek letters, while most estimators are represented by italicized Latin letters. For instance, use Greek small letter ρ (rho) to represent the population correlation and use r (italicized) to represent the sample correlation coefficient. In addition, use an uppercase, italicized N to designate the total number of the sample (e.g., $N = 258$) and a lowercase, italicized n to designate a portion of the total sample (e.g., $n = 56$). It is notable to set in standard, not italicized, typeface for subscripts

and superscripts (e.g., s^2 , R^2 , χ^2). In the following, we present examples of statistical symbols.

Greek characters: α , β , Δ , η^2 , μ , ρ , σ , σ^2 , χ^2

Latin characters: b , d , df , F , M , N , n , r , r^2 , R , R^2 , s , s^2 , SD , t , z

Spacing

When writing mathematical and statistical data, insert a space between symbols and numerals: $3 + 4 = 7$; $t(42) = 8.22$, $p < .001$. Some incorrect and correct examples of writing numbers and statistics are as follows:

Incorrect:

$N=238$, Male ($n=95$); $M=3.57$, $SD=.36$; $M = 5.2\text{cm}$ (12 % higher)

Cronbach's $\alpha = 0.88$, Cohen's $d = .70$

$r(24) = -.43$, $p < .05$; $t(24) = 5.96$, $p = .000$; $\chi^2(3) = .78$, $p > .05$

$b = .17$, $\beta = .32$, $R^2 = .05$, $\Delta R^2 = 0.02$

Correct:

$N = 238$, Male ($n = 95$); $M = 3.57$, $SD = 0.36$; $M = 5.2 \text{ cm}$ (12% higher)

Cronbach's $\alpha = .88$, Cohen's $d = 0.70$

$r(24) = -.43$, $p = .028$; $t(24) = 5.96$, $p < .001$; $\chi^2(3) = 0.78$, $p = .85$

$b = 0.17$, $\beta = .32$, $R^2 = .05$, $\Delta R^2 = .02$

Reporting Results

Inferential Statistics

In the results section, authors provide summaries of the data and the analysis (see APA, 2010, pp. 32–35). If multivariate types of analysis were conducted, sample sizes (in total and in each

category), means, standard deviations, variance-covariance (or correlation) matrix should be reported. For inferential statistical tests (e.g., χ^2 tests, t tests, F tests, regression analyses, etc.), authors should provide sufficient information for readers to understand easily the whole analytical process they conducted. Also, authors should include the test statistic, the degrees of freedom, and the exact p value, and the size and the direction of the effect. The APA style requires to include measures of effect size (e.g., Cohen's d , β , partial η^2 , ω^2 , etc.) along with confidence intervals. Some examples of reporting inferential statistics are provided in the following.

t test:

Perceived argument quality in the strong-evidence argument condition, $M = 0.44$, $SD = 0.84$, was greater than in the weak-evidence argument condition, $M = -0.27$, $SD = 0.98$; $t(164) = 5.00$, $p < .001$, Cohen's $d = 0.78$, 95% CI [0.58, 0.97].

F test:

An ANOVA was used to test the effects of the manipulations on perceived task-importance. Only the manipulation of task importance was statistically significant, $F(1, 244) = 34.83$, $p < .001$, partial $\eta^2 = .13$. Perceived task-importance was lower for the low task-importance condition, $M = -0.36$, $SD = 0.90$, than for the high task-importance condition, $M = 0.35$, $SD = 0.97$.

Regression analysis:

We conducted a hierarchical regression analysis (OLS) in which perceived desirability of partisan news, self-other perceptual gap in political knowledge, and self-other perceptual gap in critical information literacy were explanatory variables, and TPP for partisan news was the dependent variable. Respondents' age, education, and political orientation were included in the first

block of predictors as a control, $\Delta R^2 = .13$. Perceived desirability of partisan news showed a statistically significant negative effect on TPP for general other voters, $b = -0.33$, SE of $b = 0.04$, $\beta = -.33$, $p < .001$.

χ^2 test in structural equation model:

The results showed a good fit for the measurement model: $\chi^2(19, N = 455) = 27.08$, $p = .103$, CFI = 1.00, NFI = .99, RMSEA = .03, SRMR = .03.

Tables

Explaining data or lists may make the text too cumbersome, so we use tables. "Tables should be integral to the text but should be designed so that they can be understood in isolation" (APA, 2010, p. 128). In the text, refer to every table by its number (e.g., as shown in Table 2) not by its location (e.g., the table below, the table on page 28) and discuss the highlights of the table. Do not mention every item of the table. If you mention everything in the text, the table is not necessary.

Tables should have a brief but explanatory title, so that readers can easily infer the content of the table from the title. The table title starts on below the table number, and italicize the table title but do not italicize the table number. Capitalize the first letter of every word of the title.

The APA style recommends limiting the use of lines to those that are necessary. Thus, in general, vertical lines are not used, if not necessary, and horizontal lines are minimally used. Tables 1 and 2 present table samples.

Table 1. Sample Correlation Table

Table X.

Partial Correlations with Sex Controlled, Means, and Standard Deviations of Study Variables

Measure	1	2	3	4	M	SD
1. Received support	–	.19*	.13	.51***	4.44	0.90
2. Network involvement	.51***	–	.26**	.30**	4.06	1.29
3. Network importance	.38***	.27***	–	.13	5.39	1.02
4. Relationship quality	.68***	.45***	.09	–	5.87	1.71
<i>M</i>	5.66	5.54	4.65	7.41		
<i>SD</i>	1.06	0.97	1.00	1.52		

Note. Partial correlations for Koreans ($n = 110$) are presented above diagonal, and partial correlations for Americans ($n = 168$) are presented below diagonal. Means and standard deviations for Koreans are presented in the vertical columns, and means and standard deviations for Americans are presented in the horizontal rows. Adapted and modified from "Cultural Differences of Social Network Influence on Romantic Relationships: A Comparison of the United States and South Korea," by B. Jin and S. Oh, 2010, *Communication Studies*, 61, p. 165. Copyright 2010 by the Taylor & Francis.

* $p < .05$. ** $p < .01$. *** $p < .001$.

Table 2. Sample Hierarchical Regression Table

Table X.

Hierarchical Regression Analyses Predicting Third-Person Perception About Partisan News Toward Public, Conservatives, and Liberals

Predictor	Third-Person Group					
	Public		Conservatives		Liberals	
	ΔR^2	β	ΔR^2	β	ΔR^2	β
Step 1	.05***		.08***		.005	
Gender		-.03		.02		-.02
Age		-.03		.05		-.06
Education		.05		.04		-.02
Political orientation ^a		.07 [†]		.08 [†]		< .01
Step 2	.14***		.19***		.023**	
News evaluation		-.33***		-.31***		-.12*
Knowledge gap ^b		.10*		.12*		.11 [†]
Literacy gap ^b		.11*		.19***		.01
Total R^2	.19***		.26***		.028**	

Note. $N = 500$. Standardized coefficients (β) are for the final model. Adapted and modified from "Determinants of the third-person perception about partisan news effect: News desirability, perceptual gap in political knowledge, and perceptual gap in critical literacy," by S. Chung and Y. Choi, 2018, *Korean Journal of Journalism and Communication Studies*, 62(3), p. 117. Copyright 2018 by the Korean Society for Journalism and Communication Studies.

^a Higher scores indicate being more liberal (i.e., stronger attitude incongruence).

^b Positive values indicate self being more knowledgeable and literate than others.

[†] $p < .10$, * $p < .05$, ** $p < .01$, *** $p < .001$.

There are three types of notes that can be placed below the table: First, a general note explains information about the table as a whole, including definitions of abbreviations. These are indicated by the word *Note* (italicized) followed by a period (see Tables 1 and 2). Second, on a separate line below the general note, a specific note appears, which gives information about a particular column, row, or cell. These are designated by superscript lowercase letters (e.g., a, b, c). Finally, a probability note implies how asterisks symbols are used in the table to indicate *p* values (e.g., * $p < .05$, ** $p < .01$), which should start on a separate line, below any specific notes.

Figures

A figure is any type of illustration other than a table, which includes graphs, charts, maps, drawings, and photographs. Same as tables, figures should not duplicate the content of the text but should contain information that contributes substantively to understanding the manuscript. Include a figure if it is the best way to express information.

The title of a figure is included in the caption of it, which should be a brief but descriptive explanation of the figure. The caption is placed directly below the figure, which consists of italicized figure number and non-italicized figure title following the figure number. Capitalize only the first letter of the first word of the caption. As such, the way of writing a figure caption and a table title is significantly different, which seems to confuse many authors. Figures 1 and 2 show figure examples.

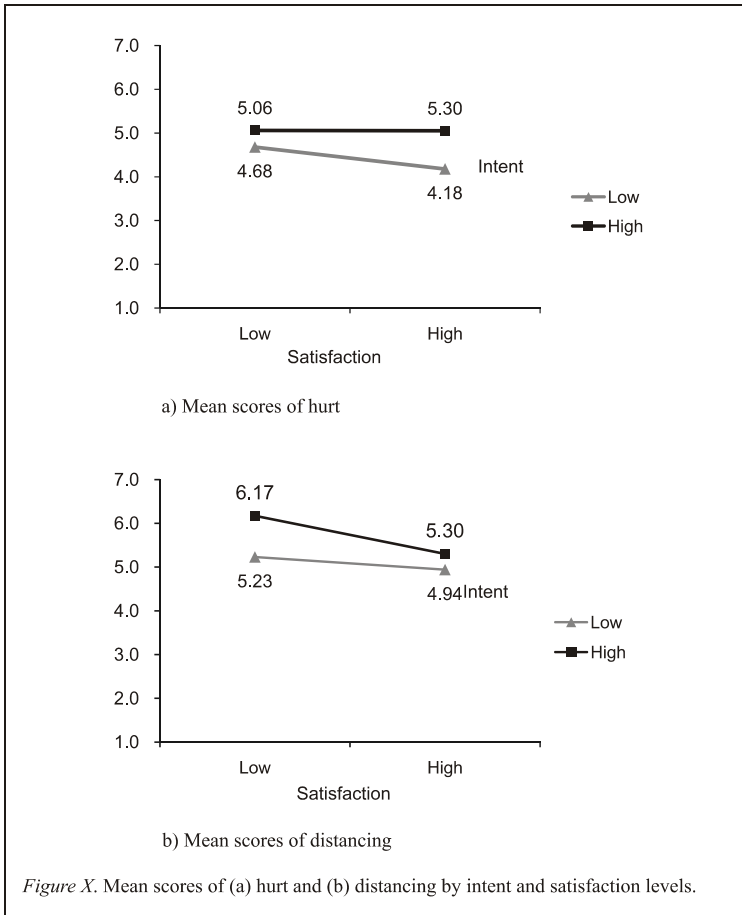

Figure 1. Sample figure of interaction effect. Adapted and modified from "Hurtful Texting in Friendships: Satisfaction Buffers the Distancing Effects of Intention," by B. Jin, 2013, *Communication Research Reports*, 30, p. 153. Copyright 2013 by the Taylor & Francis.

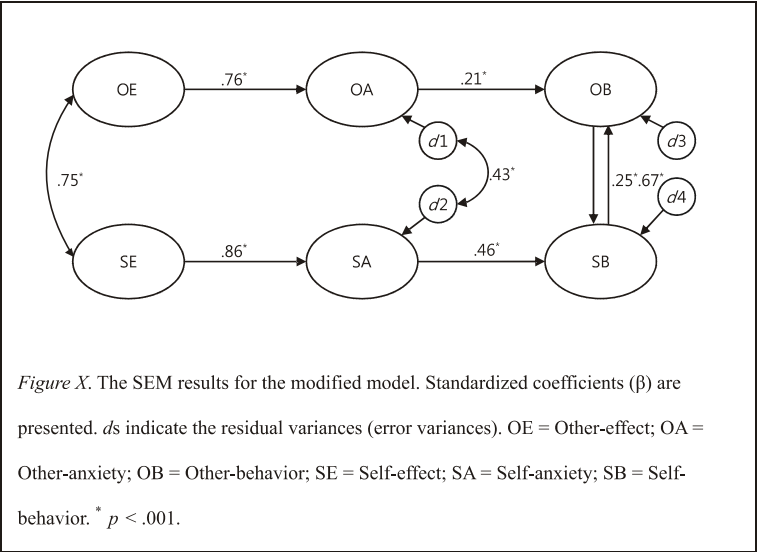

Figure 2. Sample figure of SEM results. Adapted and modified from “Media Influence on Intention for Risk-Aversive Behaviors: The Direct and Indirect Influence of Blogs Through Presumed Influence on Others,” by B. Jin, S. Chung, and S. Byeon, 2018, *International Journal of Communication*, 12, p. 2451. Copyright 2018 by B. Jin, S. Chung, and S. Byeon.

References

References in Text

APA style uses the author-date citation system, which allows readers to find the sources cited in text in the reference list. To insert a citation in text, include the author’s surname and year of publication. When a reference has two authors, cite both names with and or the ampersand (&) every time the reference is mentioned, and use the ampersand (&) in parentheses only.

Incorrect:

Jin(2013) showed the importance of relationship in ... Chung & Choi (2018) found that ... Thus, it is necessary to reconsider the premise of the third-person effect (Chung and Choi, 2018).

Correct:

Jin (2013) showed the importance of relationship in ... Chung and Choi (2018) found that ... Thus, it is necessary to reconsider the premise of the third-person effect (Chung & Choi, 2018).

For three to five authors, use all authors the first time, then use *et al.* any time after that. When a work has six or more authors, use just the first author and *et al.* every time. If you need to cite multiple works by different authors within the same parenthesis, list them alphabetically and use semicolons to separate them. For multiple works by the same authors, list the earliest work first. If the same authors have multiple works with the same publication year, use suffix letters after the year. For instance:

Jin, Chung, and Byeon (2017) conducted an experiment, ... Thus, Jin et al. found that ... It is important to consider emotions in ... (Jin et al., 2017).

As Jin et al. (2017) pointed out, ...

Several studies (Chung & Choi, 2018; Gunther, 1995; Gunther, Bolt, Borzekowski, Liebhart, & Dillard, 2006; Hoffner et al., 1999; Jeong & Chung, 2015, 2018)...

Psychological aspects of technology use (Jin, 2013a, 2013b; Jin& Park, 2013) ...

Last, for a direct quotation, indicate the page number of the phrases or sentences in the original work:

Regarding direct quotation, “always give page numbers for

quotations" (APA, 2010, p. 179).

According to APA (2010), "always give page numbers for quotation" (p. 179).

Reference List

All citations in the text should be listed at the end of the manuscript, so that readers can find and use the sources. Therefore, the list should be correct and complete. Double-space the entire reference list and use the hanging indent (about 1.27 cm) paragraph style.

Order of references. The references should be sorted in alphabetical order by the author's or the first author's surname. The same authors are arranged by year of publication. Also, it is useful to remember the rule, "nothing precedes something" (APA, 2010, p. 181).

Aron, B. C.

Aronson, B. C.

Chung, S., & Fink, E. L. (2016).

Chung, S., & Fink, E. L. (2018).

Jin, B. (2013).

Jin, B., & Oh, S. (2010).

Jin, B., Chung, S., & Byeon, S. (2018).

Types of references. There are various types of materials that writers can use, such as dissertation, periodicals, books, online articles, and many others (APA, 2010, Chapter, 7). Commonly used types include journal articles, books, and chapters in edited books. In this section, we explain how formatting varies depending on the type of references in the reference list. The general forms and examples of these three types of articles are as

following:

Journal articles (APA, 2010, p. 198)

General form:

Author, A. A., Author, B. B., & Author, C. C. (year). Title of article. *Title of Periodical*, XX, pp–pp. doi:xx.xxxxxx

When DOI is available:

Chung, S., & Fink, E. L. (2016). Sequential information integration and belief trajectories II: Testing of candidate evaluation trajectories in response to negative incongruent messages. *Communication Research*, 43, 947–971. doi:10.1177/0093650214534964

When DOI is not available:

Jin, B., Chung, S., & Byeon, S. (2018). Media influence on intention for risk-averse behaviors: The direct and indirect influence of blogs through presumed influence on others. *International Journal of Communication*, 12, 2443–2460. Retrieved from <https://ijoc.org/index.php/ijoc/article/view/7763>

When the journal is paginated separately by issue:

Chung, S., & Choi, Y.-J. (2018). Three main determinants of other-self perceptual gap in partisan news effect: Evaluation of news desirability, other-self perceptual gap in political knowledge, and other-self perceptual gap in critical literacy for political information. *Korean Journal of Journalism and Communication Studies*, 62(3), 98–129. doi:10.20879/kjcs.2018.62.3.004

Books (APA, 2010, p. 202)

General forms:

Author, A. A. (year). *Title of work*. Location: Publisher.

Editor, A. A. (Ed.). (year). *Title of work*. Location: Publisher.

Examples:

Campbell, D. T., & Stanley, J. C. (1963). *Experimental and quasi-experimental designs for research*. Belmont, CA: Wadsworth.

Kline, R. B. (2005). *Principles and practice of structural equation modeling* (2nd ed.). New York, NY: Guilford.

Book chapter (APA, 2010, p. 202)

General form:

Author, A. A., & Author, B. B. (year). Title of chapter. In A. Editor, B. Editor, & C. Editor (Eds.), *Title of book* (pp. xx–xx). Location: Publisher.

Examples:

Perloff, R. M. (2002). The third-person effect. In J. Bryant & D. Zillmann (Eds.), *Media effects: Advances in theory and research* (pp. 489–506). Mahwah, NJ: Erlbaum.

Sun, Y. (2012). When presumed influence turns real: An indirect route of media influence. In J. P. Dillard & L. Shen (Eds.), *The handbook of persuasion: Developments in theory and practice* (2nd ed., pp. 371–387). Thousand Oaks, CA: Sage.

Other types of references are also used.

Paper presentation or poster session:

Jin, B., Chung, S., & Byeon, S. (2017, November). *Blog's influence of presumed influence: The direct and indirect effects on risk-averse behavior regarding Fukushima nuclear accident*. Paper presented at the Annual Convention of the National Communication Association, Dallas, TX.

Proceedings published in book form (Similar to book chapter):

Ward, C., Ellis, D., D'Ambrosio, L. A., & Coughlin, J. F. (2018). Digital breadcrumbs: A lack of data privacy and what

people are doing about it. In M. Kurosu (Ed.), *Human-Computer Interaction: Theories, Methods, and Human Issues. HCI 2018. Lecture Notes in Computer Science, Vol 10901* (pp. 599–612). Springer International Publishing. doi:10.1007/978-3-319-91238-7_46

Online newspaper article:

Jun, J.-H. (2018, November 21). Mobile carriers struggle to find biz models in 5G. *The Korea Times*. Retrieved from <http://www.koreatimes.co.kr> [It's recommended to provide the home page URL if the article is available by search.]

Authored report from nongovernmental organization:

Smith, A., Toor, S., & van Kessel, P. (2018). *Many turn to YouTube for children's content, news, how-to lessons*. Retrieved from Pew Research Center website: <http://www.pewinternet.org/2018/11/07/many-turn-to-youtube-for-childrens-content-news-how-to-lessons>

Frequently Observed Errors

We reviewed Communication journals including Asian Communication Research and found several typical errors in writing references.

Use of comma (,) and ampersand (&) in multiple-author entries. In the reference lists, authors' names are separated by commas, and an ampersand (&) precedes the final name including two authors. However, commas before the last author are often missing. In contrast, there is no need for a comma in between two authors in the text such as Chung and Jin (2019). Regarding ampersands, it is also notable not to use "&" but to use "and" when enumerating authors' names in the (non-parenthetical) text.

Capitalization. One of the most frequently observed errors is capitalization of words in titles of books and articles in the

reference lists. The APA manual stipulates that only the first word of the title and the first word after a colon should be capitalized in the reference lists. This is, in actuality, a confusing rule because the titles of books and articles should be capitalized in every major word and words of four or more characters in the text (see the first paragraph of this article).

Volume number and issue number. In the reference lists, to follow the APA style, authors should italicize the volume numbers as well as the periodical titles but not the issue numbers. In addition, the issue number within parentheses is included only when each issue of the journal starts on page 1 (see the example below).

Incorrect:

- Chung, S. (2015). Persuasive communication. In J. Lee, J. Park, & H.-J. Paik (Eds.). *Handbook of Communication* (pp. 315–360). Seoul, Republic of Korea: Nanam.
- Chung, S. & Choi, Y.-J. (2018). Three main determinants of other-self perceptual gap in partisan news effect. *Korean Journal of Journalism and Communication Studies*, 62(3), 98–129. doi:10.20879/kjics.2018.62.3.004
- Chung, S., Fink, E. L., Waks, L., Meffert, M. F., & Xie, X. (2012). Sequential information integration and belief trajectories: An experimental study using candidate evaluations. *Communication monographs*, 79, 160–180. doi:10.1080/03637751.2012.673001

Correct:

Conclusion

Correct use of writing rules is essential for clear communication between authors and readers, between students and teachers, and between writers and publishers (Shim, 2017). In this article, we addressed some important rules of APA style, focusing on formatting issues. There is, however, more to the APA style than formatting. The manual also explain show to write a paper clearly, concisely, and ethically with an active, first-person voice. Thus, we strongly recommend that anyone who wishes to write a good paper get the manual and read it carefully. Of course, many online resources are available including the APA Style Central (<http://www.apastyle.org>). Last, journals may require different formats than what we described in this paper, even if they ask authors to follow the APA style. Therefore, in preparation of manuscript for a specific journal, it is necessary to read and comprehend the journal's instruction for authors.
